TITLE: Restoration of graphite crucibles - uses mutually
opposed threaded
plugs precoated with carbon-contg. polymer, in the
drilled-out crucible walls

ABSTRACTED-PUB-NO: SU 1699755A

BASIC-ABSTRACT: Process for repairing graphite crucibles
used for melting of
highly reactive metals and alloys employs drilling out (3)
of the defect in the
wall (2), tapping it and plugging it with two mutually
opposed plugs (4,5) of
the same material. The plugs are tightened to a specified
compression in the
range of 0.2-1.5 MPa and, prior to assembly, are coated
with a carbon polymer
selected from phenol-formaldehyde, bakelite lacquer and
furfuryl alcohol.

ADVANTAGE - The operational reliability of the process is
obtd. Bul.47/23.12.91
